SEARCH REQUEST FORM

Scientific and Technical Information Center

Requester's Full Name: W. J. ADAMS Examiner #: 78738 Date: 7-3-03
 Art Unit: 3625 Phone Number: 30605-4252 Serial Number: 09/605818
 Mail Box and Bldg/Room Location: 7B27 Results Format Preferred (circle): PAPER DISK E-MAIL

If more than one search is submitted, please prioritize searches in order of need.

Please provide a detailed statement of the search topic, and describe as specifically as possible the subject matter to be searched. Include the elected species or structures, keywords, synonyms, acronyms, and registry numbers, and combine with the concept or utility of the invention. Define any terms that may have a special meaning. Give examples or relevant citations, authors, etc, if known. Please attach a copy of the cover sheet, pertinent claims, and abstract.

Title of Invention: System For Utilizing Description Information
 Inventors (please provide full names): JAY WALKER

Earliest Priority Filing Date: 06/28/2000 7/1

For Sequence Searches Only Please include all pertinent information (parent, child, divisional, or issued patent numbers) along with the appropriate serial number.

Please search claims 32, 38, 46, 50, 59, 63, 72, and 76.

The Feature I'm looking for is Comparing
 Existing Market Share with current
 Market Share and selecting a supplier
 or retailer based on the outcome.

All claims are attached.

Also attached is a part of the spec that
 talks about the Market Share value.

STAFF USE ONLY

(C.sup.3): Enhancing Profitability through Effective Contract Management.
Med Ad News, v18, n6, pS3
June, 1999
TEXT:

KPMG's Contract Configurator and Calculator ((C.sup.3)) is among the pharmaceutical industry's first truly flexible, business-driven contract management systems. (C.sup.3) is designed to streamline business practices and provide the agility required to adapt them as corporate strategies.

In developing (C.sup.3), KPMG set out to build a contract management solution to meet the pharmaceutical industry's most pressing business needs, starting with the retention and expansion of existing contract portfolios. This challenge translates into requirements for reduced processing time, improved rebate and chargeback accuracy, and delivery of better, faster information to yield more informed business decisions.

(C.sup.3) addresses today's business agenda

(C.sup.3) was architected to provide increased capabilities to respond to business shifts and opportunities while accommodating historical data. It also helps maximize sales and contract compliance with advanced data cleansing, reconciliation and profitability features while versatile reporting capabilities allow a wide range of information viewing Options.

From the beachhead already established within the pharmaceutical rebate arena, (C.sup.3) can be readily scaled to include other industry sectors such as PBMs, chargebacks, Medicaid, and retail.

Advanced technology, rapid implementation

(C.sup.3) is a flexible, financially viable solution that can be rapidly implemented by pharmaceutical companies at far less cost -- and risk -- than proprietary systems developed in-house. It supersedes a host of industry-standard legacy packages that do not offer the adaptability and flexibility today's business environment requires.

Developed to be a modular system, (C.sup.3) is based on market-proven software engines. It employs advanced object-oriented software technology throughout, speeding implementation and delivering extremely flexible rebate structuring facilities.

Highly compatible with existing enterprise software investments, (C.sup.3) interfaces with popular enterprise resource planning (ERP) systems from SAP, Oracle, J.D. Edwards, and PeopleSoft, using the Oracle database for data warehousing. In addition, it incorporates KPMG's TRACK-UR, a widely used software application that analyzes and validates the prescription utilization data supplied to pharmaceutical companies by PBMs, mail service pharmacies, and HMOs.

(C.sup.3) functional overview

(C.sup.3)'s Contract Configurator suite offers a complete set of tools for flexible contract management, including Rebate Agreement, the easy-to-use Rebate Wizard (see section below), a formulary database, descriptions of therapeutic categories, and membership and eligibility data.

(C.sup.3) supports a wide range of rebate structures, including:

- * Administrative Fee based on Total Utilization, which establishes a flat rebated amount based on total utilization
- * Historical Benchmark Rebate, which establishes rebate rates based on past performance
- * Market Share Tiered Rebate, which creates a predefined tier structure with corresponding rebate rates based on current market share
- * Rebate & Chargeback Management capabilities, which include Data

Search Report from Ginger R. DeMille

Submission, Validation, integrated Rebate & Administrative Fee Calculation, Review & Analysis, an InstaFix Adjustment module, Reconciliation & Payment, and Dispute Resolution. Highlights of the rebate facilities include:

- * The ability to generate electronic reconciliation files at the same level of customer claim data (Rx, NDC, Plan, National).

- * Feeding all claims data (electronic and manual data) through an initial Validation Module that validates data, automatically handling valid claims and providing easy resolution for disputed claims.

Integral to (C.sup.3)'s effectiveness is its TRACK-UR module, which provides pharmaceutical companies with a tool to analyze and validate prescription utilization based on the parameters of their customer contracts. It highlights trends in the data (such as high sales combined with low pull-through), reveals inaccurate utilization data (which could result in additional rebates), enhances knowledge of customer data and activities, and helps identify customer strengths and weaknesses.

As much as 25 percent of drug utilization data may be suspect -- the result of simple mistakes, inefficiencies, or, sometimes, fraud. Bad data results in overpayments to PBMs, mail service pharmacies, and HMOs, which can add up to hundreds of thousands of dollars. TRACK-UR helps pharmaceutical manufacturers and their business partners create and maintain contracts that are equitable and auditable. It delivers accurate data, helps facilitate improved relationships, and often results in significant savings.

(C.sup.3)'s broad Informational Reporting facilities allow detailed, customized reporting and ad hoc reporting to be generated by application users. In addition to Management Reporting, this module provides Claims Tracking and Audit & Control functions.

Embracing the Web -- and the enterprise

The (C.sup.3) system employs a three-tier architecture with graphical user interfaces. The user interfaces sit atop a Backbone comprising business logic and a service layer, which in turn runs on the Oracle relational database. A cross-platform foundation, the Backbone enables browser-based applications to be readily developed, taking advantage of corporate computing power while simplifying deployment and maintaining auditability. In embracing the Web, (C.sup.3) applications can be easily targeted for internal intranet applications, as well as distributed Web applications for business partners.

(C.sup.3) was designed to readily integrate with leading ERP application suites from SAP, Oracle, J.D.Edwards, and PeopleSoft, which collectively power many organizations in the health care industry. This is accomplished through (C.sup.3)'s Packaged Bridge module.

The remarkable Rebate Wizard

Unique to (C.sup.3), the Rebate Wizard gives contract managers the powerful tools they need to create flexible rebate agreements. It can be used to define an unlimited number of rebate structures, from calculations to tiered lookups, to tiers and decision branches.

With the Rebate Wizard, contracts can be built and segmented in any number of categories, including account attributes and therapeutic classes. Rebate structures can be associated at any level of the contract, providing complete flexibility in contract representation by removing the system limitations that inhibit effective contract negotiation.

Rebate Wizard features and benefits

The Rebate Wizard is a step-by-step tool for creating new types of rebate structures. It was designed to remove the barriers of complexity and rigidity that have hindered traditional contracting systems.

(C.sup.3)'s Rebate Wizard will establish and calculate any desired rebate based on existing data elements. Script-level validation enables processing of script-level claim data against a set of business rules. These rules can range from simple range and value checks to sophisticated duplicate, crossover, and dosage checks. Validation frees manufacturers from dependence on summary-level data from trading partners, which can

often be unreliable. Summary-level validation is also performed on all other data received, either manually input or paper based.

The Rebate Wizard's Membership graphical user interface provides a tool for maintaining membership and eligibility information in a consistent manner across PBMs and HMOs. Information typically captured in this component includes plan name, plan number, start and end dates, number of lives, type of business segment, formulary name, formulary number, and numerous other elements. This tool tracks changes in membership from quarter to quarter and provides reporting capability.

(C.sup.3)'s rebate processing functions combine the output of submission validation with the agreements created using the Rebate Wizard, helping ensure accurate calculation and payment of rebates at the account and plan levels.

(C.sup.3)'s Rebate Wizard delivers an array of compelling benefits, including:

- * Script-level claim data validation
- * Pricing of Medicaid rebates can be performed within the (C.sup.3) application
- * Data that can be replicated to the field force for use at the point of negotiation
- * Superior reconciliation facilities.

KPMG's strong solution delivery experience

Rigorous, methodical project management is essential in the cost-effective delivery of business-critical systems like (C.sup.3). KPMG's project management approach divides (C.sup.3) implementation into four discrete phases, each with its own set of objectives, deliverables, milestones, and feedback loops. The phases, and their functional requirements, are as follows:

* Phase I: Analyze. This phase starts with a project kickoff and a review of the client's functional requirements. Working sessions are then conducted to refine business and user requirements. Business models are developed, and the technology architecture is identified and reviewed. A gap analysis is performed to quantify the difference between current and projected system capabilities. Last, a multistage implementation plan is developed.

* Phase II: Design. The project gets under way with the creation of a data model, the subsystem definition and development of technical specifications. Object models and system process flows are also created, and user interfaces designed. Migration plans are made to transfer business processes from old systems to (C.sup.3). Configuration parameters are identified, and data conversion and loading processes are defined. Test plans are also made in anticipation of Phase IV.

* Phase III: Develop. (C.sup.3)'s databases are converted and data is converted and/or loaded. Subsystems are developed and unit-tested, and automated test scripts created. User training plans and materials are also prepared.

* Phase IV: Test & Deploy. The final phase of (C.sup.3) implementation starts with the loading of live data. Subsystems are installed, and integrated system testing is performed. User acceptance testing is executed, followed by user training. Finally, KPMG helps ensure a smooth launch of the new system by monitoring and evaluating the transition.

KPMG's newest end-to-end solution

KPMG has a rich history in working with pharmaceutical clients around the world. The latest addition to KPMG's broad array of health care offerings, (C.sup.3) is central to KPMG's strategy to provide end-to-end solutions that meet pharmaceutical companies' stringent requirements as they compete in today's dynamic marketplace.

Taming Change, Improving Your Business

KPMG's Health Care Consulting Practice

Perhaps more than in any other industry, constant, massive change is

Search Report from Ginger R. DeMille

the primary business driver in health care. Increasing competition, heightened customer expectations, regulatory issues and evolving delivery paradigms all put pressure on health care executives as they navigate their organizations through environmental turbulence.

A holistic approach

KPMG's Health Care Consulting Practice is here to help you tame change -- and improve the way your business functions. With hundreds of clients across the United States, we understand the critical link between a winning business strategy and sustained competitive advantage.

KPMG Health Care focuses on assisting clients with end-to-end solutions; our strategy, operations, and financial and information technology professionals understand the complex market challenges and opportunities facing the interdependent companies that comprise the health care ecosystem.

Business-critical solutions

Whether your organization is a pharmaceutical, med-tech or biotech company, or a hospital, health care system, physician organization or managed care organization, we can help you find answers to pressing business challenges such as:

- * How can my organization sustain aggressive growth?
- * How can my organization anticipate and react faster to changing external threats and opportunities?
- * How can I effectively integrate a newly acquired firm to realize long-term value?
- * How can we respond more effectively to customer needs and demands?

Some IS vendors aim for one-stop shopping, others retrench

Bergman, Rhonda

Hospitals & Health Networks v68n21 PP: 66 Nov 5, 1994 CODEN: HOSIAJ

ISSN: 1068-8838 JRNL CODE: HPT

DOC TYPE: Journal article LANGUAGE: English LENGTH: 1 Pages

WORD COUNT: 735

ABSTRACT: The departure of Ameritech and Bell Atlantic from the health information systems (IS) market has caused some to wonder whether telecommunications companies, which were once bullish on health care ventures, are taking a 2nd look at their expectations. Longtime vendors that have undergone mergers and acquisitions in the past year are revising their health information system (IS) strategies. Ralph Wakerly of First Consulting Group says vendors are speculating that their survival hinges on becoming all-purpose IS vendors, so they are merging or acquiring in order to provide a full complement of products. Large IS vendors should weather current market changes because of their strong client bases, reputations, and access to capital for research, development, and possible acquisitions, Wakerly says.

TEXT: Telecommunications giant Ameritech boosted its profile in the health care information systems market when it launched a subsidiary, Health Connections, in 1992. The move seemed to be choreographed with previous efforts by Ameritech to establish a health care presence, including a major acquisition.

But earlier this fall the Chicago-based "Baby Bell" dismantled Health Connections, a developer of community health information networks and clinical systems. Those operations were merged into Ameritech's core business groups. Four senior management positions at Health Connections were subsequently lost in the shuffle.

Though health care remains on Ameritech's strategic radar screen, its integration with Ameritech's core divisions is designed to give customers better access to corporate resources and capabilities, according to a spokeswoman.

Still, one has to wonder whether telecommunications companies, which were once bullish on health care ventures, are taking a second look at their expectations. Can health care stack up against the lure of emerging consumer, markets in telecommunications, s as entertainment and interactive s vices, for example?

One recent high-profile departure from health care underlines that question. Earlier this year, Philadelphia-based Bell Atlantic sold the health care IS division it bought in 1990 in order to redirect focus on its core communications, information and entertainment businesses.

In addition to relative newcomers, longtime vendors that have undergone mergers and acquisitions in the past year are revising their health IS strategies. Call it instability or ongoing consolidation; the result is uncertainty when hospitals and health systems go IS shopping.

What does the future hold?

To survive today, IS vendors need both a good track record and something

Search Report from Ginger R. DeMille

unique to offer the marketplace, says Ralph Wakerly, national director of community health information networks for First Consulting Group, Chicago. More importantly, IS products should be cost-justifiable and capable of supporting integrated health care delivery.

Wakerly says that the recent acceleration of acquisitions and mergers among vendors echoes the consolidation occurring among providers. Vendors are speculating that their survival hinges on becoming all-purpose IS vendors, so they're merging or acquiring in order to provide a full complement of products. For example, HBO & Co., Atlanta, acquired two other health information systems companies this year, Minneapolis-based Serving Software and IBAX Healthcare Systems, Longwood, FL. And Shared Medical Systems, Malvern, PA, is completing its acquisition of GTE Health Systems, Salt Lake City.

Consolidation also grows out of the value that large HIS vendors place on market share. "You'll see the big get bigger, and some firms that don't have critical mass or market share having a tougher time," says C. Lydon Neumann, Midwest regional director for health care information technology at Ernst Young, Chicago.

Players outside the IS market

Large IS vendors should weather current market changes because of their strong client bases, reputations, and access to capital for research, development and possible acquisitions, Wakerly says. There's probably room for nonhealth IS vendors to enter the market, but he warns that health care organizations are leery of working with companies that aren't known for health care products. "They want to see where you've done it. And if you haven't done it, then you'd better be prepared to do it nearly at your own cost--if not for free--to buy your way into the market."

But the health care market isn't for everybody. Some enter it only to discover that the market doesn't have the size and scale to make a major addition to their bottom line.

Perhaps the strongest role for telecommunications companies lies in telemedicine, teleradiology, and the transmission of information through voice, data and other mediums. Mark Schneider, manager of health care delivery at the consulting firm Arthur D. Little, Cambridge, MA, expects them to play a role in CHINs, but the jury's still out on whether they will succeed as information integrators or technology suppliers.

But Wakerly wonders about their diversification efforts into CHINs, a concern that comes out of the recent changes at Ameritech.

"Many of our clients are worried about what's going to happen," he says. "Ameritech is sending mixed signals to the health care market."

IS shopping?

Know the product and the vendor

When selecting a vendor, look for:

- * Financial strength
- * Current and historical market share
- * The market share that they stand to gain
- * Whether a company's products have evolved from mainframe to client/server

Search Report from Ginger R. DeMille

* Whether the company is showing leadership in new areas of automation, such as managed care, computer-based patient records and data integration

 price for used ship in effect or near the time of payment. The
 dependence or payment amount on financial performance of freight
 shipping operating is less than dependence on market rate. The return
 of capital payment amount is based on capital amount, market freight
 shipping rate and scrap rate at the time of terminating payment. An
 INDEPENDENT CLAIM is also included for computer.
 USE - For financing capital asset of service business such as
 freight shipping operation.
 ADVANTAGE - Allows ship owners to raise equity financing, rather
 than relying on loan financing. Equity financing reduces exposure to
 market risks, and improves the ability of shipping operators to weather
 market down terms. Prevents the lender from having to foreclose and
 sell the ship at precisely the point in the market when secondhand ship
 values are at low point. Credit risk for investors is reduced as the
 financing costs are linked to shipping market cycle. Moral hazard is
 reduced because lenders and minority **share** holders assume **market**
 risk. The fairness and predictability of investment contract are
 improved as **coupon** and principal payments are effectively linked to
 freight rate index and relatively immune to tampering by parties.
 Investors are given the opportunity to hedge their exposure to the
 shipping market. Cash flows from fleet of ships can be securitized.
 Investors funding a fleet of ships can rest assured that profits
 generated by the assets funded will be available to service debt.
 DESCRIPTION OF DRAWING(S) - The figure shows the flow chart of
 capital asset financing method.

...SPECIFICATION THE INVENTION

Consumer packaged goods companies are always looking for effective ways to increase the **market share** of their **brands**. The "option" or "self-destruct" retail **coupon** is one such technique. The consumer is encouraged to purchase more product or convert from a competitor's product. The "option" or "self-destruct" retail **coupon** is arranged with multiple portions whose corresponding values are concealed from the consumer until the...

...the options. When the selection is made, the selected portion remains intact and can be **redeemed** at the store, while the non-selected portion is destroyed and rendered invalid, thereby negating double **redemption** of the non-selected **coupon** value. A **coupon** is rendered invalid when it lacks the legal terms and conditions covering the consumer **redemption** conditions and retailer reimbursement text. The number of coupons **redeemed** or not **redeemed** provides useful information to the sponsor of the option or self-destruct **coupon**.

Various designs for option or self-destruct coupons have been suggested or put into actual...

English Abstract

A method for insuring a stock option issued by an individual company from among a population of companies, to a beneficiary from among a population of beneficiaries, against loss of working ability of the beneficiary and consequent loss of the stock option, the stock option being vestable on at least one vesting date, the method including computing an economic risk factor characterizing the behavior of stock options in the population of companies and an actuarial risk factor characterizing the likelihood of loss of working ability in the population of beneficiaries and, on at least one vesting date, computing a premium based on the economic and actuarial risk factors and on the value of the shares on the vesting date.

French Abstract

L'invention concerne un procede relatif a l'assurance d'une option d'achat d'actions proposee par une compagnie appartenant a un ensemble de compagnies, a un beneficiaire appartenant a un ensemble de beneficiaires. Il s'agit d'assurer la perte du potentiel de travail du beneficiaire et la perte resultante de l'option. Cette option peut etre exercee au moins a une date d'acquisition. Le procede consiste a calculer un facteur de risque economique caracterisant le comportement des options d'achat d'actions au sein de l'ensemble de compagnies, et un facteur de risque actuariel caracterisant la probabilite de perte du potentiel de travail au sein de l'ensemble de beneficiaires, et a calculer, au moins a une date d'acquisition, une prime sur la base de ces deux facteurs et sur la base de la valeur des actions a la date en question.

English Abstract

Systems and methods for offering and servicing financial instruments creates a way for issuers to offer financial instruments that are accretive to earnings regardless of the Price/Earnings ratio. Specifically, the present invention provides systems and methods for offering and servicing convertible or exchangeable contingent conversion financial instruments.

French Abstract

La presente invention concerne des systemes et des procedes d'offre et de gestion d'instruments financiers pour permettre a des emetteurs d'offrir des instruments financiers qui sont des acquisitions rentables indifferemment du rapport cours/benefice. Plus particulierement, la presente invention concerne des systemes et des procedes d'offre et de gestion d'instruments financiers convertibles ou echangeables par fonds de reserve.

English Abstract

Methods and systems for conducting demand-based trading are described. In one embodiment, states are established, each state corresponding to at least one possible outcome of an event of economic significance. An investment amount may be determined as a function of a selected outcome, a desired payout, and a total amount invested in the states. In another embodiment, an investment amount may be determined as a function of parameters of a financial product. In another embodiment, a payout may be determined as a function of an investment amount, a selected outcome, a total amount invested in the states, and an identification of a state corresponding to an observed outcome of the event.

French Abstract

L'invention concerne des procedes et des systemes permettant d'effectuer des echanges commerciaux bases sur la demande. Dans un mode de realisation, des etats sont etablis, chaque etat correspondant a au moins un resultat possible d'un evenement a signification economique. Un montant d'investissement peut etre determine en fonction d'un resultat selectionne, un reglement voulu, et un montant total investi dans les etats. Dans un autre mode de realisation, un montant d'investissement peut etre determine en fonction de parametres d'un produit financier. Dans un autre mode de realisation, un reglement peut etre determine en fonction d'un montant d'investissement, d'un resultat selectionne, d'un montant total investi dans les etats, et d'une identification d'un etat correspondant a un resultat observe de l'evenement.

English Abstract

Methods and systems for offering and servicing financial instruments create a way for issuers to offer financial instruments with incentives to holders to not voluntarily convert or redeem such instruments so that issuers maintain greater flexibility and control over the maturity date of the instrument and the manner in which it is settled. Additionally, some embodiments of this invention provide issuers of convertible and exchangeable financial instruments with the ability to deduct an amount for tax purposes that approximates the true economic cost of the financial instrument.

French Abstract

L'invention concerne des procedes et des systemes d'offre et de gestion de services financiers donnant une possibilite aux emetteurs d'offrir, a des detenteurs, des instruments financiers avec incitation a ne pas volontairement convertir ou racheter de tels instruments de facon que les emetteurs puissent garder une plus grande souplesse et une plus grande maitrise sur l'echeance de l'instrument et la maniere dont il est mis en place. En outre, certaines realisations de cette invention permettent aux emetteurs d'instruments financiers convertibles et échangeables de pratiquer une deduction fiscale dont le montant est voisin du coût économique réel de l'instrument financier.

English Abstract

A convertible financial instrument provides incentives to holders to keep the instruments outstanding so that issuers maintain flexibility and control over the maturity date of the instrument and the manner in which it is settled. The instrument may provide issuers with the ability to deduct an amount for tax purposes that approximates the true economic cost of the financial instrument. The instrument may contain a provision calling for contingent payments (which may include, for example, contingent interest, preferred distributions, contingent principal, dividends, and other pay-outs) to the holder in some circumstances, which may be based on formulae calculations. For example, this may occur when the trading value of the convertible instrument exceeds a pre-determined value such as, for example, a certain percentage of the accreted value of the convertible instrument, or, for example, another circumstance that may trigger a contingent payment may be when the price of another financial instrument (e.g., the underlying security, the reference security, etc.) is below, higher than, or equal to a pre-determined value.

French Abstract

L'invention concerne un instrument financier convertible offrant aux detenteurs des primes les encourageant a conserver les instruments en circulation, de maniere que les emetteurs conservent une certaine flexibilite et un certain controle sur la date d'echance de l'instrument et sur la facon d'etablir celle-ci. L'instrument permet aux emetteurs de deduire une somme des impots, cette somme representant de maniere approximative le cout economique reel de l'instrument financier. L'instrument peut presenter une disposition selon laquelle le detenteur doit effectuer des paiements eventuels (notamment, par exemple, l'interet eventuel, des distributions preferrees, le capital eventuel, des dividendes et d'autres remboursements) dans certaines circonstances pouvant etre fondees sur des calculs de quotas. Un tel cas peut se presenter, par exemple, quand la valeur de transaction de l'instrument convertible depasse une valeur predeterminee, telle que, par exemple, un certain pourcentage de la valeur accrue de l'instrument convertible ou, a titre d'exemple d'autre circonstance pouvant declencher un paiement eventuel, on peut citer, le fait que le prix d'un autre instrument financier (par exemple, le titre sous-jacent, le titre de reference, etc.) soit inferieur, superieur ou egal a une valeur predeterminee.

English Abstract

A contingent convertible debt instrument contains a provision permitting conversion only if any of certain economically substantial contingencies is satisfied. For example there may be a provision that conversion is permitted only if the issuer's stock price reaches some price, defined as some predetermined price substantially higher than the conversion price, is reached. This contingent conversion trigger price may be 110% or 120% more of the conversion price. The debt instrument may be a negotiable long-term zero-coupon note, and a provision may be included that the number of underlying instruments issuable or deliverable at conversion or exchange is adjusted under certain circumstances (e.g., merger, acquisition, or formulae amounts). Corresponding methods and systems are employed for offering and servicing such financial instruments.

French Abstract

L'invention porte sur un instrument de dette convertible par fonds de reserve contenant une disposition selon laquelle la conversion n'est autorisee que si certains fonds de reserve importants s'averent suffisants. A titre d'exemple, on peut ajouter une disposition n'autorisant la conversion que si le prix des obligations de l'emetteur atteint une certaine somme, nettement superieure au prix de conversion. Ce prix de declenchement de la conversion de fonds de reserve peut etre plus eleve que le prix de conversion, a savoir 110 % ou 120 %. L'instrument de dette peut etre un bon-coupon zero negociable sur le long terme et on peut inclure une disposition selon laquelle le nombre d'instruments sous-jacents emissibles ou livrables lors d'operations de conversion ou d'echange est regle dans certaines circonstances (p.ex. fusion, acquisition ou quotas). A cet effet, on utilise des procedes et des systemes correspondants en vue d'offrir de tels instruments financiers.

English Abstract

This invention provides methods and systems for trading and investing in groups of demand-based adjustable return ("DBAR") contingent claims, including digital options, and for establishing markets and exchanges for such claims. The advantages of the present invention, as applied to the establishment and operation of a DBAR digital options exchange, include the ability to offer investments whose profit and loss scenarios are comparable to those for digital options or other derivatives in traditional securities markets, without the need for options or derivatives sellers or order-matching of conventional markets. A DBAR digital options exchange of the present invention can also offer conditional investments, or limit orders, in which an investment in a state of a DBAR contingent claim (such as the price of an underlying asset or index) can be executed or withdrawn in response to the implied probability of the occurrence of that state.

French Abstract

L'invention porte sur des procedes et sur des systemes s'appliquant au commerce et a l'investissement dans des groupes de revendications contingentes de retours ajustables a base de demande (\leq DBAR \geq), incluant des options numeriques, et a l'etablissement de marches et de bourses d'echange pour de telles revendications. Les avantages de cette invention tels qu'ils s'appliquent a la creation et a la mise en oeuvre

Search Report from Ginger R. DeMille

d'une bourse d'echange DBAR d'options numeriques, comportent investissements dont les scenarios de pertes et profits sont comparables a ceux des options numeriques et autres derives dans des marches de valeurs traditionnels, sans qu'il y ait besoin de vendeurs d'options ou de derives ou d'adequation des ordres comme dans le cas des marches conventionnels. Une bourse echange d'options numeriques DBAR de cette invention permet egalement de proposer des investissements conditionnels ou des ordres limites permettant d'executer un investissement sous forme d'une revendication contingente DBAR (tel que le prix d'un actif de garantie ou un indice), ou de le retirer en reaction a la probabilite sous-jacente de la survenue de cette condition.

English Abstract

A method for maintaining a uniform asset value per share and complete fungibility among all shares in investment funds while providing for differential fees, credits and factors which may be differentially applicable to separate investors. The method permits accounting for an investor's shares to be classified into different categories in respect of such factors as **redemption** rights or fees due, while maintaining a complete fungibility among such **shares**. The methods includes monitoring general **market** inputs (501), tracking information on each investor's investments (520), determining asset value per share (507), and determining net asset value for each investor (511). The present invention also makes possible a single accounting method for both domestic investment funds organized as partnership, typically not classifying investment in such entities into any uniform quanta, and offshore investment funds organized as corporations, trusts or other entities, typically classifying investments in such entities into uniform quanta such as shares or units.

French Abstract

L'invention concerne un procede qui permet de maintenir une valeur uniforme de l'actif net par action et une fongibilite complete parmi toutes les actions d'un fonds de placement, tout en garantissant les droits differentiels et les credits, de meme que les eventuels autres facteurs pouvant etre appliques de maniere differenciee a divers investisseurs, separement en ce qui concerne chaque investisseur. Le procede de l'invention permet egalement de classer les actions d'un seul investisseur en differentes categories, en consideration de facteurs tels que des droits de rachat ou des droits dus, tout en maintenant une fongibilite complete parmi ces actions de sorte qu'il ne soit pas necessaire d'identifier une quelconque action particuliere comme appartenant a une quelconque categorie particuliere. On peut en outre programmer une methode comptable unique a la fois pour les fonds de placement interieurs organises en partenariat, generalement sans classement des investissements dans de telles entites en quanta uniformes, et pour les fonds de placement a l'etranger organises en corporations, fiducies ou autres entites, generalement par classement des investissements dans lesdites entites en quanta uniformes, tels que des actions ou des parts.

English Abstract

A new form of security designated the proxy asset provides risk management capabilities, such as liquid interests in illiquid assets and economic indicators, without the deficiencies associated with other types of financial instruments. A proxy assets set is defined to respond to one or more indices. Each proxy asset has a share value and a number of

Search Report from Ginger R. DeMille

shares. The proxy assets have a proxy assets set account value equal to a sum over all proxy assets of the products of the share value and the number of shares. At least one proxy asset account value per share is a function of an index. The function is called an account formula. The account value for the entire set of proxy assets is constrained by a value of a resources pool. The proxy asset account value is reevaluated according to the account formula upon occurrence of each event of a plurality of predetermined events.

French Abstract

L'invention concerne une nouvelle forme de titre dit actif de substitution, fournissant des capacites de gestion du risque, tels que des liquidites dans des actifs non liquides et des indicateurs economiques, sans les inconvenients associees a d'autres types d'instruments financiers. Un ensemble d'actifs de substitution est defini pour repondre a un ou plusieurs indices. Chaque actif de substitution possede une valeur de part et un nombre de parts. Les actifs de substitution ont une valeur comptable d'ensemble des actifs de substitution egale a la somme de tous les actifs de substitution des produits de la valeur des parts et du nombre de parts. Au moins une valeur comptable d'actif de substitution par part est fonction d'un indice. Cette fonction est dite formule comptable. La valeur comptable de l'ensemble des actifs de substitution est limitee par une valeur d'un groupement de ressources. La valeur comptable de l'actif de substitution est reevaluee en fonction de la formule comptable sur la survenance de chaque evenement d'une pluralite d'evenements predetermines.

English Abstract

A method and system provides a loyalty program in conjunction with an online promotions system wherein users are presented with promotions at least some of which include rewards associated with certain user actions. Where a user selects and downloads a promotion (204), the loyalty system updates (206) the user loyalty account to give credit for a first reward associated with the selected promotion. Upon the user taking a further action (208) on the promotion, such as by purchasing the good or service associated with the promotion, the loyalty system provides the user with a second loyalty reward and updates (210) the user loyalty account to reflect a credit for the second reward. The system may operate in conjunction with a point-of-sale system, wherein the second reward is instantaneously updated and presented to the user. The online promotions system presents the user with a status of current loyalty rewards received and pending loyalty rewards which could be received upon the user taking further action.

French Abstract

L'invention porte sur un procede et un procede relatifs a un programme de fidelisation associe a un systeme de promotions en ligne selon lequel le client se voit proposer des articles promotionnels dont certains comportent des cadeaux lies a certaines de ses actions. Lorsque le client selectionne et telecharge un article promotionnel (204), le systeme de fidelisation actualise (206) son compte de fidelite et lui attribue un credit pour un premier cadeau associe a ladite promotion. Lorsque le client selectionne une nouvelle fois (208) l'article promotionnel (204) par exemple en acquerant le bien ou le service promotionnel, le systeme de fidelisation lui octroie un deuxieme cadeau et actualise (210) en consequence son compte de fidelite. Le systeme peut etre exploite en liaison avec un systeme de points de vente, la deuxieme recompense etant instantanement actualisee et presentee au client. Le systeme de promotions en ligne offre au client la possibilite de percevoir immediatement ses cadeaux de fidelite ou de les percevoir lors de l'une de ses actions suivantes.

Fulltext Word Count: 14647

English Abstract

A method and system for rendering accurate bar code images (84) in a distributed network wherein a plurality of different types of rendering devices, such as printers (116, 120), having different resolution characteristics are connected for rendering such images. The resolution of a connected rendering device (116, 120) is detected and the bar code image (84) to be rendered by such device (116, 120) is scaled to effect proper alignment of the resolution units of the bar code (84) and the rendering device (116, 120) whereby the need for interpolation is effectively obviated. The bar code (84) is scaled by a whole integer multiplier of the minimum bar code size based on at least one dimension of the print area of the bar code display and the resolution characteristics of the rendering device (116, 120). The bar code image is aligned or mapped and is centered in the display area (126) with equal units of the excess print area on either side of the image (124). By avoiding the need to interpolate print data by the rendering device (116, 120), the bar code rendering system defeats inaccuracies in detection and decoding and provides a more reliable data recovery system.

French Abstract

L'invention porte sur un systeme et un procede de reproduction d'images (84) de codes barres dans un reseau distribue auquel sont raccordes plusieurs types d'equipements de reproduction tels que des imprimantes (116, 120) presentant des resolutions differentes. A cet effet, on detecte la resolution de l'equipement de reproduction (116, 120), puis on met a l'echelle le code barres a reproduire pour assurer la concordance requise entre le lecteur de codes barres (84) et l'equipement de

Search Report from Ginger R. DeMille

reproduction (116, 120), ce qui supprime la necessite d'interpoler. La taille du code barres est un multiple entier de la taille minimale d'un code barres, fonction d'une au moins des dimensions de l'aire d'impression sur le support et de la resolution de l'equipement de reproduction (116, 120). L'image (124) du code barres est alignee ou mappee et centree sur l'aire d'impression en laissant des blancs egaux de part et d'autre. En supprimant l'interpolation par l'equipement de reproduction (116, 120), le systeme elimine les imprecisions de detection et de decodage et assure une restitution plus fiable des donnees.

share**

database according to one embodiment of the present invention;

FIG. 13 is a flow chart...

...FIG. 14 is a flow chart of process steps to update stored information
based on **redemption** information according to one embodiment of the
present invention;

0

FIGS. 15A to 15E...

...chart of process steps to determine whether to accept an offer based on
received **redemption** information according to one embodiment of
the present invention; and

FIG. 18 illustrates a tabular...a redemption transaction database 1200,
vi) a retail price database 1300, and vii) a **market share** database
1400. The databases 800 to 1400 are described in detail below and
portions thereof...in the database 1400 includes fields specifying: i) a
retailer identifier 1420; ii) a target **market share** 1430; and iii) a
present **market share** 1440.

The target **market share** 1430 associated with a retailer identifier
1420

identifies the percentage of a relevant market which...

...attempt

23

to provide to the retailer identified by the retailer identifier 1420. The target **market share** 1430 may be established by a contract between the retailer and the controller 200. The relevant market may consist of the market for providing agreement products for **redemption** under agreements with the controller 200, the entire market for particular products, or another **market**.

The present **market share** 1440 is determined based on **redemption** information received by the controller 200. For example, if half of all **redemptions** under agreements between customers and the controller 200 occur at one retailer, the present **market share** 1440 may be 50 percent. Again, the market can be defined in many ways, including based on the number of **redemptions**, on the amount of money spent during **redemptions**, or by another **market** measure.

Generally, the **market share** database 1400 may be used to assign a retailer to an agreement. To **redeem** an agreement product under an agreement, a customer is instructed to visit a retailer assigned to the agreement and to present a

ID

15 **redemption** identifier to the assigned retailer. Accordingly, in some embodiments, an agreement product may be **redeemed** under an agreement only at a retailer assigned to the agreement. For example, since, according...

...the retailer identified by the retailer identifier 1420 R-4251 is associated with a present **market share** 1440 greater than the associated target **market share** 1430, the controller 200 may determine not to assign the retailer to a particular agreement...200 creates records in the retailer database 800, the retail price database 1300, and the **market share** database 1400 corresponding to the retailer.

The received redemption information may also be used...

...redeems agreement products, which may also be stored in association with the customer.

The present **market share** 1440 of the **market share** database 1400 may be updated in step SI506 using received redemption information. Specifically, **redemption** information identifying a retailer at which a **redemption** took place will likely affect the present **market share** 1440 of each retailer identified by the retailer identifiers 1420 in the **market share** database 1400. As described above, the **market share** tracked by the **market share** database 1400 may relate to a number of visits, a total amount spent by customers **redeeming** products, a total amount of products sold, or the like.

In another example, a retail...

...average additional purchase amount made at a retailer, promotions available at a retailer, a target **market share** corresponding to a retailer,

29

a present **market share** possessed by a retailer, a time of day (week, month) at which customer volume at...

...the customer, offers made

Search Report from Ginger R. DeMille

by each customer, information relating to offers made by each customer, **redemption** history of each customer, date and time of a past **redemption**, a number of units **redeemed** during a previous **redemption**, or an average retail price of a product at all retailers.

As another example of...3252 in step S1606 and flow continues to step SI 608.

A record of the **market share** database 1400 is retrieved based on a region indicated by the received **redemption** information in step S1608. For example, the received **redemption** information shown in FIG. 15A reflects the retailer identifier 1220 R According to the retailer...

...810 R is associated with region 870 "A". Therefore, in step S1608, a portion of the **market share** database 1400 corresponding to region 1410 "A" is retrieved. FIG.

15C shows the portion...

...market share database 1400 retrieved in step S1608 according to the current example.

The present **market share** 1440 for each record in the retrieved portion of the **market share** database 1400 is recalculated and updated based on the received **redemption** information in step SI610. As described above, the market share may reflect a number of **redemptions** under agreements between customers and the controller 200, a number of gallons **redeemed** at a retailer in relation to a total 10 number of gallons **redeemed** under such agreements, or some other market. FIG.

15D shows the present market ...conforming retailers are determined in step S 1716, a portion of the **market share** database 1400 corresponding to the subject region is retrieved in step S1718. A portion of the **market share** database 1400 corresponding to the region 1410 "A" which may be retrieved in step S 1718 is shown in FIG. 12. Based on information in the **market share** database ...determined in step SI 720. Assigned retailers are those retailers at which the customer may **redeem** an agreement product. For example, the portion of the **market share** database 1400 shown in FIG. 12 reflects records corresponding to the 30 conforming retailers. For each record shown, the target **market share** 1430 is compared to the present **market share** 1440. In the present example, the target
35

market share 1430 is greater than the present **market share** 1440 only in the record associated with the retailer identifier 1420 R Accordingly, each other retailer reflected in the database 1400 is understood to possess more **market share** than allotted. It is therefore determined in step SI 720 that the assigned retailer is...

Claim

... the

step of determining an assigned retailer comprises a comparing step to compare a present **market share** associated with a conforming retailer to a target **market share** 25 associated with the conforming retailer.
51. An apparatus comprising:

means for preparing for a customer to **redeem** a product from a third party; means for obtaining information relating to a **redemption** of the product by

Search Report from Ginger R. DeMille

30 the customer; and
means for deciding to accept an offer...the processor is further
operative with the processor-executable process steps to compare a
present **market share** associated with the third party to a target
market share associated with the third party.

52

. A device for a sales transaction, comprising:
a memory...

...wherein the processor is operative with the processor-executable process
steps to: i) receive a **redemption** identifier from a customer, ii)
provide a product to the customer according to an agreement associated
with the **redemption** identifier, iii) transmit information relating to
the providing step to an entity, and iv) receive...the processor is
further
operative with the processor-executable process steps to compare a
present **market share** associated with a conforming retailer to a
target **market share** associated with the conforming retailer.

Detailed Description

Detailed Description

... one embodiment of step 1803, a manufacturer providing the agreement product is identified using a **market share** database. FIG. 19A illustrates a tabular representation of a portion of the **market share** database 1900 according to one embodiment of the invention. As shown in FIG. 19A, associated with each manufacturer 1910 is a percentage target **market share** 1920, a percentage actual 10 **market share** 1930 and a percentage difference 1940. The percentage target **market share** 1920 specifies a percentage of all bound customers that it is desired to have **redeem** gasoline at a retailer selling gasoline produced by the associated manufacturer 1910. The percentage target **market share** 1920 is based on an agreement between each manufacturer 1910 and the controller 200. For...

...may require a manufacturer to pay \$ 1,000 per month for each percent of target **market share** allotted to the manufacturer. Therefore, in order to guarantee a 25% **market share**, a manufacturer 1910 pays \$25,000 per month to the controller 200.

The percentage actual **market share** 1930 is a statistic determined by the controller 200 based on an actual percentage of all bound customers that **redeem** gasoline at the associated manufacturer 1910, and the percentage difference 1940 is obtained by subtracting the percentage target **market share** 1920 from the percentage actual **market share** 1930 of the manufacturer 1910. In the example shown in FIG.

19A, the manufacturer "Exxon...

English Abstract

An apparatus and method of automatically and anonymously buying and selling positions in fungible properties between subscribers over a network is described, an embodiment of which relates to the buying and selling of securities or contracts where the offer to purchase or sell the property may be conditioned upon factors such as the ability to purchase or sell other property or the actual purchase or sale of other property. The system described includes methods for matching buy and sell orders using other markets to effect the execution of transactions without violating conditions set by the subscriber, and reporting prices to third parties. A communication system (10, 12, 14) is described which allows subscribers to communicate anonymously for the purpose of effecting transactions.

French Abstract

Systeme et procede servant a acheter et a vendre, de facon automatique et anonyme, des titres de proprietes fungibles entre des abonnees par l'intermediaire d'un reseau, dont un mode de realisation specifique consiste a acheter et a vendre des valeurs mobilieres ou des contrats pour lesquels l'offre d'achat ou de vente de la propriete peut etre conditionnee par des facteurs tels que la possibilite d'acheter ou de vendre une autre propriete ou l'achat ou la vente reels d'une autre propriete. Ce systeme concerne des procedes consistant a mettre en correspondance les ordres de vente et d'achat au moyen d'autres marches afin d'executer des transactions sans faillir aux conditions etablies par l'abonnee et sans rapporter les prix a des tiers. L'invention concerne

Search Report from Ginger R. DeMille

egalement un systeme de communication (10, 12, 14) permettant aux abonnées de communiquer anonymement dans le but d'effectuer des transactions.

English Abstract

A central controller (218) or controllers with databases of customer's information includes customer purchases. After a period of time, the central controller (218) allocates a reward incentive to customers' accounts as per their activities in the form of equity in the seller's company. The central controller (218) records the average weighted stock price when the securities are bought, and calculates the total or a fraction of the securities a customer is entitled to receive and post the amounts accordingly. When customers want to exercise their equity rights, they have the choice to sell for cash or receive stock for further appreciation. The method and apparatus of the present invention may be applied in particular in the context of an electronic commerce system.

French Abstract

L'invention concerne une ou plusieurs unites de commande centrales (218) associees a des bases de donnees d'informations client, qui comprennent les achats d'un client. Apres une periode de temps, l'unite de commande centrale (218) attribue une prime aux comptes du client, proportionnellement a ses activites, sous forme d'actions de la compagnie du vendeur. L'unite de commande centrale (218) enregistre le cours moyen pondere de l'action lors de l'achat des valeurs mobilieres et calcule le total ou une partie des valeurs qu'un client a le droit de recevoir, puis reporte les sommes en consequence. Lorsque des clients veulent exercer leurs droits lies aux actions, ils peuvent choisir de vendre en echange de liquide ou de recevoir des titres en vue d'une reevaluation. Le procede et l'appareil de la presente invention peut notamment s'appliquer dans le contexte d'un systeme de commerce electronique.

French Abstract

L'invention concerne un systeme et une methode pour la creation d'un type d'investissement optimise, reduisant considerablement le rapport risque/gain par rapport aux investissements traditionnels. Ladite invention emploie un systeme de traitement de donnees permettant de creer, evaluer et gerer un investissement qui sauvegarde la valeur residuelle de l'investissement. Le systeme de traitement de donnees permet egalement de maximiser les avantages fiscaux de l'investissement, de se premunir contre les taxations defavorables de l'administration fiscale, et d'offrir aux investisseurs, la possibilite d'investir dans des investissements a haut risque et haut rendement, avec des risques reduits ou nuls de perte de capital d'investissement ou d'illiquidite.

Fulltext Word Count: 150171

English Abstract

A system, method, and article of manufacture are provided that afford a combination of commerce-related web application services. Various features are included such as allowing purchase of products and services via a displayed catalog. As an option, such catalog may be personalized. In various embodiments, a virtual shopping cart environment may be provided. Further, data, i.e. specifications, details, etc., relating to the products and services may be displayed along with a comparison between different products and services. Data relating to needs of a user may also be received for the purpose of outputting a recommendation of the products and services based on the inputted needs. Optionally, features of the products and services may be listed in order to allow the user to configure a specifically tailored product or service. Yet another aspect of the present invention includes outputting an estimate relating to a price and/or availability of the products and services. Further, an order for the products and services may be received after which a tax and a shipping fee are calculated. A status of the delivery of the ordered products and services may also be provided.

French Abstract

L'invention concerne un systeme, un procede et un article manufacture destines a la fourniture d'une combinaison de services d'application dans le Web lies au commerce. Le systeme presente plusieurs caracteristiques telles que l'achat de produits et de services grace a un catalogue affiche. En option, ce catalogue peut etre personnalise. Plusieurs modes de realisation peuvent comprendre un environnement de chariot de supermarche virtuel. En outre, des donnees, c.-a.-d. des specifications, des details, etc., se rapportant aux produits et services peuvent etre affichees en meme temps qu'une comparaison entre differents produits et services. On peut aussi inclure des donnees relatives aux besoins d'un utilisateur afin de recommander des produits et services donnees sur la base des besoins entres. Eventuellement, on peut etablir une liste des caracteristiques des produits et services afin de permettre a l'utilisateur de configurer un produit ou un service personnalise. Dans un autre aspect de la presente invention, on peut produire une estimation du prix et/ou de la disponibilite des produits et services. En outre, une commande peut etre recue et une taxe et des frais d'expedition calcules. Un etat de l'expedition des produits et services commandes peut egalement etre etabli.

English Abstract

A computer-based system for reducing market risk for a given portfolio by examining the expected market risk, pricing it, and transferring some or all of it in exchange for consideration, which can be either cash, other property or part of the opportunity cost forgone in connection with or an assignment of part of the portfolio. A user (1-1) will select a portfolio of securities to be protected, and the account to be shielded is devised by the computer-based system and executed and transacted for the user. The portfolio is then analyzed and prices the requested shielding in a variety of different manners. The user (1-1) then selects the protection desired and the payment method, and the securities shielded are then held in the system or a third party custodial arrangement (1-7) or noted as the selected reference securities in connection with a virtual portfolio.

French Abstract

L'invention concerne un systeme informatise destine a reduire les risques du marche pour un portefeuille donne. Ce systeme consiste a examiner les risque escomptes du marche, a les chiffrer, et a les transferer partiellement ou entierement en valeur d'echange, qui peut etre soit du numeraire, soit un autre bien, soit une partie du cout de renonciation lie au portefeuille ou a un transfert d'une partie de ce dernier. Un utilisateur (1-1) selectionne un portefeuille de valeurs a proteger, et le compte a proteger est elabore par le systeme informatise, les

Search Report from Ginger R. DeMille

operations et transactions s'y referant etant executees pour l'utilisateur. Le portefeuille est ensuite analyse, et ledit systeme chiffre la protection demandee de plusieurs facons differentes. L'utilisateur (1-1) selectionne alors la protection desiree et le mode de paiement, et les valeurs protegees sont ensuite conservees par le systeme, ou par accord de depot avec un tiers (1-7), ou inscrites en tant que valeurs de reference selectionnees parallelement a un portefeuille virtuel.

English Abstract

A secure architecture for value exchanges among parties (58, 60, 62), such that the parties can be widely distributed geographically and can employ a wide range of Accounting Units. It comprises a formalized legal contract in a special format, a public key that identifies each party, a computer for each party (54), a software program (56) for each party that can create, validate, sign, store, encrypt, transmit, and execute contracts, a communication method between the computers, and a database (52) for each party to hold the contracts and Identity information (98) for each party.

French Abstract

Architecture securisee permettant d'echanger des valeurs entre parties (58, 60, 62), de facon que lesdites parties puissent etre tres eloignees geographiquement et utiliser une grande diversite d'unites de compte. L'architecture comprend un contrat formalise conformement a la loi, presente sous un format special; une cle publique identifiant chaque partie; un ordinateur pour chaque partie (54); un programme (56) logiciel pour chaque partie, capable de creer, valider, signer, stocker, coder, transmettre et executer des contrats; une technique permettant aux ordinateurs de communiquer; et une base de donnees (52) pour chaque partie, destinee a conserver les contrats et les informations (98) d'identite de chaque partie.

Fulltext Word Count: 10125

English Abstract

A method and system for electronic distribution of product redemption coupons (18) to computers (6) located at users' homes. A centrally located repository (2) stores coupon data for downloading to the computer (6). The user may view, select, sort and print desired coupons (18) from the data. User demographic as well as coupon selection data is returned to the repository (2), coupon distributor (16) and issuers (14) for marketing analysis. The repository (2) performs coupon processing on coupon data such as variation of discounts. The repository (2) determines frequency a particular coupon (18) was viewed. Upon presentation at a retail store (10), the discount is provided to the user. Upon redemption by the store (10), transaction data is supplied to the coupon issuers (14) and distributor for integration into marketing analysis. The electronic coupon system is secured by inclusion of user-specific identification indicia printed thereon.

French Abstract

L'invention concerne un procede et un systeme de distribution electronique de coupons (18) de remboursement de produit sur des ordinateurs (6) situes chez des utilisateurs. Un dispositif d'archivage central stocke des donnees de coupon de maniere a telecharger l'ordinateur (6). L'utilisateur peut visualiser, selectionner, trier et imprimer les coupons (18) desires a partir de ces donnees. L'etude quantitative des utilisateurs ainsi que les donnees de selection de coupon sont retournees au dispositif d'archivage (2), au distributeur de coupon (16) et aux emetteurs (14) afin d'effectuer une analyse marketing. Le dispositif d'archivage (2) execute le traitement de coupon sur des donnees de coupon telles que la variation des remises. Le dispositif d'archivage (2) determine la frequence a laquelle un coupon (18) particulier a ete visualise. Lors de la presentation du coupon dans un magasin de detail (10), la remise est effectuee a l'utilisateur. Lors du remboursement par le magasin, des donnees de transaction sont fournies aux emetteurs (14) de coupons et aux distributeurs afin d'etre integrees dans l'analyse marketing. Le systeme de coupon electronique est garanti par l'inclusion d'indices d'identification specifiques a l'utilisateur, imprimes sur ledit coupon.

English Abstract

An Internet-protocol based anonymous trading system which enables traders to identify bids and offers which they are eligible to trade based upon a color coded methodology which gives the trader credit preference information about the potential counterparty while still maintaining the anonymity of the potential counterparty. To that end, each bid or offer is prescreened against all possible counterparties' credit information in the system and each counterparty sees a unique color coded trading interface based upon their particular credit preference combinations and the others in the system. The system then shows all prices in the system, and the color-coding tells the trader which prices he is able to trade, and also shows him the full depth of

the market, including those the trader is unable to trade.

French Abstract

Système de négociation anonyme basé sur un protocole Internet, qui permet à des négociateurs d'identifier les soumissions et les offres pour la négociation desquelles ils sont éligibles. Le système est basé sur une méthodologie de codes de couleurs, qui donne au négociateur des informations de préférence de crédit sur les contreparties éventuelles, tout en conservant l'anonymat desdites contreparties. À cet effet, chaque soumission ou offre est préalablement examinée à la recherche de toutes les informations de crédit des contreparties du système, et chaque contrepartie voit une interface de négociation avec un code d'une seule couleur sur la base de ses propres combinaisons de préférences de crédit et de celles des autres participants au système. Le système présente ensuite tous les prix, et le codage par couleurs indique au négociateur quels prix il est capable de négocier et lui montre la totalité du marché, y compris les prix qu'il est incapable de négocier.

English Abstract

By employing the present invention, a delivery system comprising drinking straws (21) as a holder or instrument for secretly retaining a prize award (22) is realized. The drinking straws of the present invention may be randomly intermixed with conventional non-prize bearing straws, while being incapable of detection prior to opening the cover or holder (23) associated therewith. In this way, prize awards such as cash and/or models of prizes being won are secretly hidden and randomly distributed by lucky customers who instantly win the prize award.

French Abstract

La presente invention concerne un systeme d'attribution comprenant des pailles (21) pour boisson comme support ou instrument destine a contenir secretement un prix (22). Les pailles pour boisson, selon la presente invention, peuvent etre melangees de maniere aleatoire avec des pailles pour boisson classiques non assorties de prix. Il est impossible de detecter la presence ou non d'un prix avant l'ouverture du couvercle ou du support (23) associe a la paille. De cette facon, les prix tels que de l'argent et/ou des representations de prix gagnes sont caches et distribues secretement de maniere aleatoire au joueur chanceux qui gagne immediatement le prix.

Fulltext Word Count: 23477

English Abstract

The present invention discloses a method and apparatus of creating a financial instrument (figure 1) which, in exchange for money payments placed with a participating financial institution (figure 1), guarantees return of principal and payment of an adjustable rate of interest over a specified period of time and administering an adjustable rate loan system (figure 1). The interest crediting rate (figure 2) is established each year (figure 2) for the following year (figure 2), within a corridor of minimum and maximum contractually specified rates (figure 2). This rate is generally expected to float in excess of the rate of government securities of similar term, providing the lender (figure 1) with a new method of compensation for accepting longer term risk. The system (figure 1) protects and improves borrower (figure 1) solvency and credit quality by allowing reduced interest payments (figure 1) in periods of reduced financial ability. The financial instrument (figure 1) may be issued as a debt obligation, an annuity contract, a certificate of deposit or other form. The instrument may be an obligation of an insurance company, bank, single purpose corporation, a trust or other entity.

French Abstract

L'invention concerne un procede et un appareil permettant, d'une part, de creer un instrument financier (figure 1) qui, en echange d'un reglement effectue aupres d'un organisme financier participant (figure 1), garantit le remboursement du capital et le paiement d'un taux d'interet variable sur une periode determinee et, d'autre part, la gestion d'un systeme de pret a taux variable (figure 1). Le taux d'interet inscrit au credit (figure 2) est etabli chaque annee (figure 2) pour l'annee suivante (figure 2), dans une fourchette de taux minimal et maximal definis par contrat (figure 2). D'une maniere generale, ce taux flotte en principe au-dessus du taux des fonds d'Etat a terme similaire, le preteur (figure 1) disposant ainsi d'une nouvelle technique d'indemnisation pour les risques a long terme. En ce qui concerne l'emprunteur, ce systeme (figure 1) garantit et ameliore sa solvabilite ainsi que la qualite du credit puisqu'il permet de reduire le montant des interets (figure 1) en periode de baisse des capacites financieres. L'instrument financier (figure 1) peut etre emis sous forme de titre de creance, de contrat de rente, de certificat de placement ou autre. Il peut etre une obligation d'une compagnie d'assurances, d'une banque, d'une societe a vocation unique, d'un groupe ou d'une autre entite.

English Abstract

A data processing system and method is disclosed for implementing and

Search Report from Ginger R. DeMille

control of a financial debt instrument which is listed for a limited period of time and is traded as a listed security (20). The debt instrument is based on an underlying basket of stocks optimally selected to track an established capital market (1) and its price also reflects accrued investment income and maintenance expenses. The data processing system receives input from the capital market and periodically evaluates the performance of the financial debt instrument, reporting its price to customers (5). Also disclosed is a data processing system for administering an investment group of such debt instruments designed to track the performance of several domestic and foreign markets, estimate their return and provide current price information to customers.

French Abstract

Systeme et procede de traitement de donnees permettant de mettre en oeuvre et de gerer un titre de creance inscrit en bourse pour une periode limitee et negocie sous forme d'une valeur cotee (20). Ce titre de creance est emis en fonction d'un portefeuille d'actions sous-jacent selectionne de facon optimale afin de suivre un marche financier etabli (1), et sa valeur reflète également les frais de maintenance et les revenus d'investissement accumules. Ce systeme de traitement de donnees recoit des donnees en entree du marche financier et estime periodiquement les performances du titre de creance, communiquant sa valeur aux clients (5). L'invention se rapporte également a un systeme de traitement de donnees permettant de gerer un groupe d'investissement de tels titres de creance, concu pour suivre les performances de plusieurs marches nationaux et etrangers, evaluer leur rendement et fournir aux clients des informations relatives aux prix courants.

English Abstract

A system and method of allowing a shopper to obtain the benefit of reduced prices for certain items without the necessity of redeeming paper coupons is described. The system employs an integrated circuit (IC) smart card (2) containing an erasable memory (6) therein. This memory (6) would contain information relating to a discount coupon amount, as well as information relating to particular products which have been purchased. This card (2) would be inserted into a reader/writer terminal (62) provided at a retailer's checkout counter. Items which are purchased are scanned and compared with items to be discounted as well as the information provided by the customer IC smart card (2). After the cashier has totaled the customer's purchases, the information contained in the IC smart card would be altered accordingly.

French Abstract

Systeme et procede permettant a un acheteur d'obtenir le benefice de prix reduits sur certains articles sans avoir a se faire rembourser de coupons. Le systeme utilise une carte a puce a circuit integre (2) munie d'une memoire effacable (6) qui contient des informations relatives au montant des coupons de remise ainsi que des informations relatives aux differents produits achetes. Ladite carte (2) s'insere dans un terminal de lecture/ecriture (62) situe a une caisse de sortie du detailant. Les articles achetes sont passes au scanner et compares aux articles objets de remises ainsi qu'aux informations de la carte a puce (2) du client. Lorsque le caissier a totalise les achats du client, les informations de la carte (2) sont modifiees en consequence.

English Abstract

A bill pay system (figure 4) wherein participating consumers (12) pay bills (30) to participating billers (14) through a payment network (102) operating according to preset rules (104). The participating consumers (12) receive bills (3) from participating billers (14) (paper/mail bills, e-mail notices, implied bills for automatic debts) which indicate an amount, and a unique biller identification number (120). To authorize a remittance, a consumer (12) transmits (2) to its participating bank (16) a bill pay order (122) indicating a payment date, a payment amount, the consumer's account number with the biller (14), a source of funds (232) and the biller's (14) biller identification number, either directly or by reference to static data containing those data elements. Bank C (16) then submits a payment message (124) to a payment network (102), and the payment network (102), which assigns the biller reference numbers, forwards (268) the payment message to the biller's bank (18). For settlement, the consumer's bank (16) debits the consumer's (12) account and is obligated to a net position with the payment network (102); likewise, the biller's bank (18) receives a net position from the payment network (102) and credits the biller's bank account (268). If the consumer's bank (16) agrees to send non-reversible payment messages (124), the consumer's bank (16) does not submit the transaction until funds are good unless the consumer's bank (16) is willing to take the risk of loss if funds are not good, in the case of a guaranteed payment network (102).

French Abstract

Systeme de paiement de factures (figure 4) dans lequel les consommateurs participants (12) paient des factures (30) a des organismes de facturation participants (14) par un reseau de paiement (102) exploite selon des regles preetablies (104). Les consommateurs participants (12) recoivent des factures (3) envoyees par lesdits organismes de facturation participants (14) (factures sur papier expediees par la poste, avis par reseau E-mail, factures implicites pour dettes a recouvrement automatique) sur lesquelles figurent un montant et un numero d'identification unique (120) de l'organisme de facturation. Pour

Search Report from Ginger R. DeMille

autoriser la remise, le consommateur transmet (2) a sa banque participante (16) un ordre de paiement de facture (122) sur lequel figurent la date et le montant du paiement, le numero de compte du consommateur avec l'organisme de facturation (14), une source de fonds (232) et le numero d'identification de la facture (14) de l'organisme de facturation, soit directement soit par reference a des donnees statiques contenant ces elements d'informations. La banque C (16) envoie ensuite une message de paiement (124) dans un reseau de paiement (102), lequel (102) attribue un numero de reference a l'organisme de facturation et envoie (268) le message de paiement a la banque dudit organisme (18). Pour le reglement, la banque (16) du consommateur debite le compte (12) du consommateur et est tenue d'etre en position nette avec le reseau de paiement (102). De la meme maniere, la banque (18) de l'organisme de facturation accepte d'envoyer un message de paiement non reversible (124), la banque du consommateur (16) ne soumettant pas la transaction tant que la provision n'est pas suffisante, sauf si, meme en cas de provision insuffisante, la banque (16) du consommateur souhaite prendre des risques, dans un reseau de paiement avalise (102).

English Abstract

A redeemable coupon dispensing, real-time closed loop system (10) is provided, preferably including a recycling machine (50) for accepting returnable containers, that has an on board computer (18) controlling an on board coupon printer (32) and coupon dispenser (28). The recycling machine is typically located near an establishment that accepts the redeemable coupons and dispenses one or more coupons (60) when it

Search Report from Ginger R. DeMille

receives recyclable containers. Upon redemption, the coupon is scanned (read) and cancelled so that it cannot be reused. The read coupon information remains within the system and is transmitted for evaluation by the coupon issuer who modifies or updates information to be printed on subsequent coupons using the printer housed within the recycling machine. Updated information to be printed on coupons can be generated using a coupon distributor computer, which is located away from the recycling machine and which is accessible by one having authority to change information on the coupons.

French Abstract

Système de distribution de coupons remboursables en temps reel et en boucle fermée (10). Il comprend de préférence une machine à recycler (50) les recipients récupérables munie d'un ordinateur intégré (32) et d'un distributeur de coupons (28). Cette machine sera de préférence installée à proximité d'un établissement qui accepte les coupons remboursables et les délivre (60) à la réception de recipients recyclables. Les coupons recus sont lus par balayage et annulés de manière à ne pas pouvoir être réemployés. L'information figurant sur ces coupons est mémorisée dans le système et est transmise pour appréciation par le distributeur de coupons qui modifie ou actualise les données à imprimer sur les coupons suivants, à l'aide de l'imprimante installée dans la machine à recycler. Une fois mises à jour, les données à imprimer peuvent être sorties sur un ordinateur relié au distributeur de coupons. Cet ordinateur sera séparé de la machine à recycler et son accès sera réservé au responsable chargé de modifier les informations figurant sur les coupons.

English Abstract

A financial system for managing client accounts consisting of first and second media investments is disclosed. The first media represents a revenue producing investment and the second media represents a negotiable draft type of investment. The system controls the issuance and the transfer of draft. Buy and sell orders are supervised to balance values between the first and second investments such that outstanding draft is supported by the first media investment. Provision is made for the system to collect a charge upon transfer or issue of drafts and further provision is made for the owner of record of a draft to continue to benefit from the earnings of the associated value of first media investment even after transfer of the draft to another party under selected circumstances.

French Abstract

Un systeme financier pour gerer des comptes clients comprend des premier et second moyens de placement. Le premier moyen represente un placement qui rapporte et le second moyen represente un placement du type traite negociable. Le systeme gere l'emission et le transfert de traite. Le systeme supervise les ordres d'achat et de vente afin d'equilibrer les valeurs entre les premier et second placements de sorte que l'effet a recouvrer soit couvert par le premier moyen de placement. Le systeme permet le prelevement de frais lors du transfert ou de l'emission des faits et permet egalement au detenteur un titre des faits de continuer a beneficier des gains de la valeur associee du premier moyen de placement meme apres transfert de l'effet a un tiers dans des circonstances choisies.

TEXT:

KPMG's Contract Configurator and Calculator ((C.sup.3)) is among the pharmaceutical industry's first truly flexible, business-driven contract management systems. (C.sup.3) is designed to streamline business practices and provide the agility required to adapt them as corporate strategies.

In developing (C.sup.3), KPMG set out to build a contract management solution to meet the pharmaceutical industry's most pressing business needs, starting with the retention and expansion of existing contract portfolios. This challenge translates into requirements for reduced processing time, improved rebate and chargeback accuracy, and delivery of better, faster information to yield more informed business decisions.

(C.sup.3) addresses today's business agenda

(C.sup.3) was architected to provide increased capabilities to respond to business shifts and opportunities while accommodating historical data. It also helps maximize sales and contract compliance with advanced data cleansing, reconciliation and profitability features while versatile reporting capabilities allow a wide range of information viewing Options.

From the beachhead already established within the pharmaceutical rebate arena, (C.sup.3) can be readily scaled to include other industry sectors such as PBMs, chargebacks, Medicaid, and retail.

Advanced technology, rapid implementation

(C.sup.3) is a flexible, financially viable solution that can be rapidly implemented by pharmaceutical companies at far less cost -- and risk -- than proprietary systems developed in-house. It supersedes a host of industry-standard legacy packages that do not offer the adaptability and flexibility today's business environment requires.

Developed to be a modular system, (C.sup.3) is based on market-proven software engines. It employs advanced object-oriented software technology throughout, speeding implementation and delivering extremely flexible rebate structuring facilities.

Highly compatible with existing enterprise software investments, (C.sup.3) interfaces with popular enterprise resource planning (ERP) systems from SAP, Oracle, J.D. Edwards, and PeopleSoft, using the Oracle database for data warehousing. In addition, it incorporates KPMG's TRACK-UR, a widely used software application that analyzes and validates the prescription utilization data supplied to pharmaceutical companies by PBMs, mail service pharmacies, and HMOs.

(C.sup.3) functional overview

(C.sup.3)'s Contract Configurator suite offers a complete set of tools for flexible contract management, including Rebate Agreement, the easy-to-use Rebate Wizard (see section below), a formulary database, descriptions of therapeutic categories, and membership and eligibility data.

(C.sup.3) supports a wide range of rebate structures, including:

- * Administrative Fee based on Total Utilization, which establishes a flat rebated amount based on total utilization
- * Historical Benchmark Rebate, which establishes rebate rates based on **past** performance
- * **Market Share** Tiered Rebate, which creates a predefined tier structure with corresponding rebate rates based on **current market share**
- * Rebate & Chargeback Management capabilities, which include Data Submission, Validation, integrated Rebate & Administrative Fee Calculation,

Search Report from Ginger R. DeMille

Review & Analysis, an InstaFix Adjustment module, Reconciliation & Payment, and Dispute Resolution. Highlights of the rebate facilities include:

- * The ability to generate electronic reconciliation files at the same level of customer claim data (Rx, NDC, Plan, National).

- * Feeding all claims data (electronic and manual data) through an initial Validation Module that validates data, automatically handling valid claims and providing easy resolution for disputed claims.

Integral to (C.sup.3)'s effectiveness is its TRACK-UR module, which provides pharmaceutical companies with a tool to analyze and validate prescription utilization based on the parameters of their customer contracts. It highlights trends in the data (such as high sales combined with low pull-through), reveals inaccurate utilization data (which could result in additional rebates), enhances knowledge of customer data and activities, and helps identify customer strengths and weaknesses.

As much as 25 percent of drug utilization data may be suspect -- the result of simple mistakes, inefficiencies, or, sometimes, fraud. Bad data results in overpayments to PBMs, mail service pharmacies, and HMOs, which can add up to hundreds of thousands of dollars. TRACK-UR helps pharmaceutical manufacturers and their business partners create and maintain contracts that are equitable and auditable. It delivers accurate data, helps facilitate improved relationships, and often results in significant savings.

(C.sup.3)'s broad Informational Reporting facilities allow detailed, customized reporting and ad hoc reporting to be generated by application users. In addition to Management Reporting, this module provides Claims Tracking and Audit & Control functions.

Embracing the Web -- and the enterprise

The (C.sup.3) system employs a three-tier architecture with graphical user interfaces. The user interfaces sit atop a Backbone comprising business logic and a service layer, which in turn runs on the Oracle relational database. A cross-platform foundation, the Backbone enables browser-based applications to be readily developed, taking advantage of corporate computing power while simplifying deployment and maintaining auditability. In embracing the Web, (C.sup.3) applications can be easily targeted for internal intranet applications, as well as distributed Web applications for business partners.

(C.sup.3) was designed to readily integrate with leading ERP application suites from SAP, Oracle, J.D.Edwards, and PeopleSoft, which collectively power many organizations in the health care industry. This is accomplished through (C.sup.3)'s Packaged Bridge module.

The remarkable Rebate Wizard

Unique to (C.sup.3), the Rebate Wizard gives contract managers the powerful tools they need to create flexible rebate agreements. It can be used to define an unlimited number of rebate structures, from calculations to tiered lookups, to tiers and decision branches.

With the Rebate Wizard, contracts can be built and segmented in any number of categories, including account attributes and therapeutic classes. Rebate structures can be associated at any level of the contract, providing complete flexibility in contract representation by removing the system limitations that inhibit effective contract negotiation.

Rebate Wizard features and benefits

The Rebate Wizard is a step-by-step tool for creating new types of rebate structures. It was designed to remove the barriers of complexity and rigidity that have hindered traditional contracting systems.

(C.sup.3)'s Rebate Wizard will establish and calculate any desired rebate based on existing data elements. Script-level validation enables processing of script-level claim data against a set of business rules. These rules can range from simple range and value checks to sophisticated duplicate, crossover, and dosage checks. Validation frees manufacturers from dependence on summary-level data from trading partners, which can often be unreliable. Summary-level validation is also performed on all

other data received, either manually input or paper based.

The Rebate Wizard's Membership graphical user interface provides a tool for maintaining membership and eligibility information in a consistent manner across PBMs and HMOs. Information typically captured in this component includes plan name, plan number, start and end dates, number of lives, type of business segment, formulary name, formulary number, and numerous other elements. This tool tracks changes in membership from quarter to quarter and provides reporting capability.

(C.sup.3)'s rebate processing functions combine the output of submission validation with the agreements created using the Rebate Wizard, helping ensure accurate calculation and payment of rebates at the account and plan levels.

(C.sup.3)'s Rebate Wizard delivers an array of compelling benefits, including:

- * Script-level claim data validation
- * Pricing of Medicaid rebates can be performed within the (C.sup.3) application
- * Data that can be replicated to the field force for use at the point of negotiation
- * Superior reconciliation facilities.

KPMG's strong solution delivery experience

Rigorous, methodical project management is essential in the cost-effective delivery of business-critical systems like (C.sup.3). KPMG's project management approach divides (C.sup.3) implementation into four discrete phases, each with its own set of objectives, deliverables, milestones, and feedback loops. The phases, and their functional requirements, are as follows:

- * Phase I: Analyze. This phase starts with a project kickoff and a review of the client's functional requirements. Working sessions are then conducted to refine business and user requirements. Business models are developed, and the technology architecture is identified and reviewed. A gap analysis is performed to quantify the difference between current and projected system capabilities. Last, a multistage implementation plan is developed.

- * Phase II: Design. The project gets under way with the creation of a data model, the subsystem definition and development of technical specifications. Object models and system process flows are also created, and user interfaces designed. Migration plans are made to transfer business processes from old systems to (C.sup.3). Configuration parameters are identified, and data conversion and loading processes are defined. Test plans are also made in anticipation of Phase IV.

- * Phase III: Develop. (C.sup.3)'s databases are converted and data is converted and/or loaded. Subsystems are developed and unit-tested, and automated test scripts created. User training plans and materials are also prepared.

- * Phase IV: Test & Deploy. The final phase of (C.sup.3) implementation starts with the loading of live data. Subsystems are installed, and integrated system testing is performed. User acceptance testing is executed, followed by user training. Finally, KPMG helps ensure a smooth launch of the new system by monitoring and evaluating the transition.

KPMG's newest end-to-end solution

KPMG has a rich history in working with pharmaceutical clients around the world. The latest addition to KPMG's broad array of health care offerings, (C.sup.3) is central to KPMG's strategy to provide end-to-end solutions that meet pharmaceutical companies' stringent requirements as they compete in today's dynamic marketplace.

Taming Change, Improving Your Business

KPMG's Health Care Consulting Practice

Perhaps more than in any other industry, constant, massive change is the primary business driver in health care. Increasing competition,

Search Report from Ginger R. DeMille

heightened customer expectations, regulatory issues and evolving delivery paradigms all put pressure on health care executives as they navigate their organizations through environmental turbulence.

A holistic approach

KPMG's Health Care Consulting Practice is here to help you tame change -- and improve the way your business functions. With hundreds of clients across the United States, we understand the critical link between a winning business strategy and sustained competitive advantage.

KPMG Health Care focuses on assisting clients with end-to-end solutions; our strategy, operations, and financial and information technology professionals understand the complex market challenges and opportunities facing the interdependent companies that comprise the health care ecosystem.

Business-critical solutions

Whether your organization is a pharmaceutical, med-tech or biotech company, or a hospital, health care system, physician organization or managed care organization, we can help you find answers to pressing business challenges such as:

- * How can my organization sustain aggressive growth?
- * How can my organization anticipate and react faster to changing external threats and opportunities?
- * How can I effectively integrate a newly acquired firm to realize long-term value?
- * How can we respond more effectively to customer needs and demands?

Some IS vendors aim for one-stop shopping, others retrench

Bergman, Rhonda

Hospitals & Health Networks v68n21 PP: 66 Nov 5, 1994 CODEN: HOSIAJ

ISSN: 1068-8838 JRNL CODE: HPT

DOC TYPE: Journal article LANGUAGE: English LENGTH: 1 Pages

WORD COUNT: 735

ABSTRACT: The departure of Ameritech and Bell Atlantic from the health information systems (IS) market has caused some to wonder whether telecommunications companies, which were once bullish on health care ventures, are taking a 2nd look at their expectations. Longtime vendors that have undergone mergers and acquisitions in the past year are revising their health information system (IS) strategies. Ralph Wakerly of First Consulting Group says vendors are speculating that their survival hinges on becoming all-purpose IS vendors, so they are merging or acquiring in order to provide a full complement of products. Large IS vendors should weather current market changes because of their strong client bases, reputations, and access to capital for research, development, and possible acquisitions, Wakerly says.

TEXT: Telecommunications giant Ameritech boosted its profile in the health care information systems market when it launched a subsidiary, Health Connections, in 1992. The move seemed to be choreographed with previous efforts by Ameritech to establish a health care presence, including a major acquisition.

But earlier this fall the Chicago-based "Baby Bell" dismantled Health Connections, a developer of community health information networks and clinical systems. Those operations were merged into Ameritech's core business groups. Four senior management positions at Health Connections were subsequently lost in the shuffle.

Though health care remains on Ameritech's strategic radar screen, its integration with Ameritech's core divisions is designed to give customers better access to corporate resources and capabilities, according to a spokeswoman.

Still, one has to wonder whether telecommunications companies, which were once bullish on health care ventures, are taking a second look at their expectations. Can health care stack up against the lure of emerging consumer, markets in telecommunications, s as entertainment and interactive s vices, for example?

One recent high-profile departure from health care underlines that question. Earlier this year, Philadelphia-based Bell Atlantic sold the health care IS division it bought in 1990 in order to redirect focus on its core communications, information and entertainment businesses.

In addition to relative newcomers, longtime vendors that have undergone mergers and acquisitions in the past year are revising their health IS strategies. Call it instability or ongoing consolidation; the result is uncertainty when hospitals and health systems go IS shopping.

What does the future hold?

To survive today, IS vendors need both a good track record and something

Search Report from Ginger R. DeMille

unique to offer the marketplace, says Ralph Wakerly, national director of community health information networks for First Consulting Group, Chicago. More importantly, IS products should be cost-justifiable and capable of supporting integrated health care delivery.

Wakerly says that the recent acceleration of acquisitions and mergers among vendors echoes the consolidation occurring among providers. Vendors are speculating that their survival hinges on becoming all-purpose IS vendors, so they're merging or acquiring in order to provide a full complement of products. For example, HBO & Co., Atlanta, acquired two other health information systems companies this year, Minneapolis-based Serving Software and IBAX Healthcare Systems, Longwood, FL. And Shared Medical Systems, Malvern, PA, is completing its acquisition of GTE Health Systems, Salt Lake City.

Consolidation also grows out of the value that large HIS vendors place on market share. "You'll see the big get bigger, and some firms that don't have critical mass or market share having a tougher time," says C. Lydon Neumann, Midwest regional director for health care information technology at Ernst Young, Chicago.

Players outside the IS market

Large IS vendors should weather current market changes because of their strong client bases, reputations, and access to capital for research, development and possible acquisitions, Wakerly says. There's probably room for nonhealth IS vendors to enter the market, but he warns that health care organizations are leery of working with companies that aren't known for health care products. "They want to see where you've done it. And if you haven't done it, then you'd better be prepared to do it nearly at your own cost--if not for free--to buy your way into the market." But the health care market isn't for everybody. Some enter it only to discover that the market doesn't have the size and scale to make a major addition to their bottom line.

Perhaps the strongest role for telecommunications companies lies in telemedicine, teleradiology, and the transmission of information through voice, data and other mediums. Mark Schneider, manager of health care delivery at the consulting firm Arthur D. Little, Cambridge, MA, expects them to play a role in CHINs, but the jury's still out on whether they will succeed as information integrators or technology suppliers.

But Wakerly wonders about their diversification efforts into CHINs, a concern that comes out of the recent changes at Ameritech.

"Many of our clients are worried about what's going to happen," he says. "Ameritech is sending mixed signals to the health care market."

IS shopping?

Know the product and the vendor

When selecting a vendor, look for:

- * Financial strength
- * **Current and historical market share**
- * The **market share** that they stand to gain
- * Whether a company's products have evolved from mainframe to client/server

Search Report from Ginger R. DeMille

* Whether the company is showing leadership in new areas of automation, such as managed care, computer-based patient records and data integration

Target Market Share ...

Experience has shown that the most successful acquisitions are of businesses operating in the same...

...or a closely related one. Mercury focuses its investment efforts on businesses with high relative **market share**, because empirically such businesses demonstrate higher **returns** on capital than competitors. The key explanations for this phenomenon include:

- * larger **market share** implies an ability to extract greater economies of purchasing from suppliers;

- * fixed overheads can be spread over a greater volume of sales;

- * a larger **market share** implies an ability to serve the largest

Search Report from Ginger R. DeMille

customers;

* and the existence of a more concentrated...from the competition authorities. In the UK, this is automatically the case if the combined **market share** of the two businesses exceeds 25%. Pre-acquisition planning must include careful consultation with professional...

...for acquisitions. Higher prices are being paid and these instruments are being used to drive **returns**. The equity provider must ensure that the financial condition of the company pre and post...in the first quarter of 1997. The team at Mercury considered very carefully the likely **returns** to shareholders of this quoted company from its investment plans. It concluded that, on a return on capital employed basis, additional funds provided to Luminar would generate **returns** acceptable to an investor in private equity and Mercury clients subscribed 7.5 million of...

Title: Windows NT vs. NetWare: more bravado than battle (LAN operating systems)

Author(s): Korzeniewski, P.

Journal: Business Communications Review vol.23, no.4 p.35-8

Publication Date: April 1993 Country of Publication: USA

CODEN: BCORBD ISSN: 0162-3885

Language: English

Subfile: B C

Search Report from Ginger R. DeMille

...Abstract: However, Windows NT could hurt Banyan Systems Inc., (Westborough, MA) as it struggles to increase **market share** for its Vines operating system. Novell's Unix products, which will complement rather than compete with NetWare, will gain a small but growing number of customers. The **target market** consists of firms that want to use Novell-like packages to downsize applications but don...

FIRM STRATEGIES IN INTERNATIONAL MARKETS: THE CASE OF INTERNATIONAL ENTRY INTO THE UNITED STATES WINE INDUSTRY (MARKET ENTRY, INTERNATIONAL TRADE)

Author: SOLANA ROSILLO, JUAN B.
Degree: PH.D.
Year: 1997
Corporate Source/Institution: PURDUE UNIVERSITY (0183)
Source: VOLUME 59/01-A OF DISSERTATION ABSTRACTS INTERNATIONAL.
PAGE 259. 214 PAGES

...that Australian firms, entering by a marketing subsidiary instead of exporting directly, rapidly increased their **market share**.

For the case of wine imports to the US, country of origin does not determine firm-level performance. Entry mode and marketing strategy in the **target market** better explain market outcomes. Australia shows numerous dynamic new entrants that, together with appropriate marketing strategies, explain Australian **market share** gain in the US **market**. Also, dynamic Spanish entrants succeed in the US market, while Spanish incumbent firms stagnated.

Spanish...

Abstract: United States firms collectively spend over \$6.5 billion annually on **coupon** promotions and are becoming increasingly concerned with their profitability. Free-standing-insert data show that **coupon** duration varies across brands. In this paper, we show how **coupon** duration can affect **coupon** profitability. We also provide answers for some empirical observations on **coupon** duration. We explain, for example, why (1) **coupon** duration will vary across firms, such that large **market share** firms will give short-duration coupons and small **market share** firms will give long-duration coupons; (2) longer **coupon** duration for one brand will increase **redemption** for coupons of that brand and of a competing brand; and (3) **coupon** duration will affect **coupon** profitability.

...than 310 billion coupons are issued annually, very little is known about the effectiveness of **coupon redemptions** . The profitability of couponing operations depend on both the **redemption** rate and the incremental sales generated by **coupon** drops. Brand managers might use coupons for reasons beyond maximization of profits. For example, in...

...maintaining profits at pre promotion level or even accepting a reduction in profits to capture **market share**). Further, the impact of a manufacturer's **coupon** on a particular chain's sales will also depend on the shelf price of the...

...impact of shelf price on brand sales will depend on the face value of the **coupon** and time since it is dropped. Therefore the price elasticity of demand is not only a function of the shelf price and other store causal variables, but also of **coupon** face value and time since the **coupon** drop. This research proposes and empirically validates a model that investigates the impact of **coupon** face value on **redemption** rates, brand sales, brand profitability, price elasticity and **coupon** face value elasticity. The research has three steps. In step 1, the impact of **coupon** face value on **coupon redemptions** is investigated. In step 2, both the **redemption** value and advertisement value of coupons on brand sales are measured. Results of this step can also be used to calculate the price elasticity and **coupon** face value elasticity of the brand. In step 3, results from the previous two steps...
